

Scenario

Assume that you are a new employee in a company that conduct data analysis for clients. Your team obtains a data set from a client. Your supervisor asked you to analyse the data set using the tool provided and report your insights.

Tasks

You have 20 minutes for **analysing the data set** using the tool provided.

During analysis session...

- (1) **Keep talking aloud.** Say anything that goes through your mind.
- (2) Report any **inaccurate recommendations (i.e. underlined text)** provided by the system (e.g., the system says an attribute is similar/different for two groups but you do not think so after looking at the bar chart).
- (3) Report **at least five findings** from comparing different groups.
